Test: Orgone chips will decrease energy consumption by 30% to 50%

If Orgone Chips work as advertised, there will be a significant difference between using them and not using them. That is, values for subjects B, C and D will be statistically different than values for A, E and F.

Analysis of this test:

Are the domino averages different from the Orgone averages?

Voltage: No. All averages are very close or within the standard deviation for the dataset.

Wattage: No. All averages are very close or within the standard deviation for the dataset.

Are there any noticable trends or maximum/minimums from either test subject?

Voltage: No. All maxes/mins are very close or within standard deviation for the dataset.

Wattage: No. All maxes/mins are very close or within standard deviation for the dataset.

Conclusions for this test:

There is no statistical difference in using dominoes, Orgone chips, or using nothing at all.

Results claimed by proponents can not be duplicated in a blinded, randomized test.

Results: Orgone Chips do not save energy costs as claimed.
